Now offers...

CUSTOM HYDRAULIC TRAINING!

Custom tailored to your application.

We input your existing hydraulic schematic into our simulation software and offer training using YOUR OWN HYDRAULIC SYSTEM!

With our simulation software we have the ability to examine your system “in action” greatly increasing the participant’s comprehension of the functional operation of YOUR system, not just a textbook example

In addition we combine the computer simulation with an in-depth presentation on component function. We examine in detail the ACTUAL internal operation of many basic hydraulic system components to facilitate a better understanding of how each component interacts within a system. This section is presented prior to covering the custom system function to better prepare the participant to understand the various components in your system.

PACKAGES

Custom Training Sessions:

- Full day or half day training, on-site or at our facility
- Customized training packages based on your specific hydraulic system
 - Includes input of your hydraulic circuit*
 - AutoCAD & Paper copy of the hydraulic circuit drawing.
- Full day sessions cover detailed component function and your custom circuit.
- Half day sessions will concentrate almost entirely on your circuit and the simulation with limited component function coverage. (intended for those with a good understanding of the fundamentals of hydraulic systems & components).

Standard Training Sessions:

- Standard training packages include the same content as the custom training with the exception of the simulation circuit. We will use a 'generic' circuit that we already have in the system instead of designing one based on your own equipment.
- Full day sessions cover detailed component function plus circuit simulation.
- Half day sessions cover basic hydraulic training and detailed component function.

77 Auriga Drive, Unit 9
Nepean, Ont. K2E 7Z7
Tel : (613) 226-1201
Fax : (613) 723-7391

RATES:

- **Full day** CUSTOM training - \$1350***
- **½ day** CUSTOM training - \$850***
- **Full day** STANDARD training - \$1100**
- **½ day** STANDARD training - \$600**
- **Lunch will be provided on full day courses (where delivery is available).**

* Includes up to 3 hours circuit input time to input your hydraulic schematic form existing drawing. Complex circuits or those without an existing drawing may require additional time/charges. We will be happy to quote actual costs after examining your circuit or system.

** Actual run time will vary depending on previous knowledge and aptitude of the participants. Typical run time is between 6-7 hours for full day, 3-4 hours for half day.

CLASS SIZES:

NO restrictions for on-site training

8 persons max for sessions at our facility.

If you require a formal quotation, on-site demo of the simulation and training or any other information please contact your sales representative or our office at 613-226-1201.
